

Salesforce/Team Foundation Server Connector

Powered by Enterprise Enabler®

Enterprise Enabler's (EE) Salesforce.com (SFDC) / Team Foundation Server (TFS) Connector provides bi-directional synchronization for Cases, Tasks, or any other entities, from Salesforce to TFS Work Items, Tasks, Bugs, Feature Requests, etc. It is an easy to use wizard with full edit and configuration abilities included. It supports both versions of TFS, TFS 2010 or greater on premise or Visual Studio Online (<http://www.visualstudio.com>).

With this connector you can deliver status updates between sales, product management, support and development teams, which will improve release cycle schedules, productivity and customer satisfaction throughout your organization.

Key Benefits

Faster Integration

- ✓ Intuitive wizard provides easy setup in minutes
- ✓ Flexibility to map specific fields between systems
- ✓ Ability to fully customize and insert business logic between the integration points
- ✓ Ability to filter data for synchronization
- ✓ Automate Synchronization between the two systems as needed: Minutes, hours, seconds

Improve Your Customer Support

- ✓ Gain immediate visibility to customer issues or product defects
- ✓ Improve customer satisfaction & exceed service levels
- ✓ Keeps sales updated on any open item

Reduce Development Costs

- ✓ No need to manually write code to intercept work item events
- ✓ No need to modify code for every release of SFDC or TFS
- ✓ Developers can focus on other projects and improve productivity

System Requirements

Operating System: 64 bit - Windows 7, 8, 10, Windows Server 2008, R2, 2012+

Salesforce.com: Spring 2010+
